

How to have multiple binaries in your Golang package

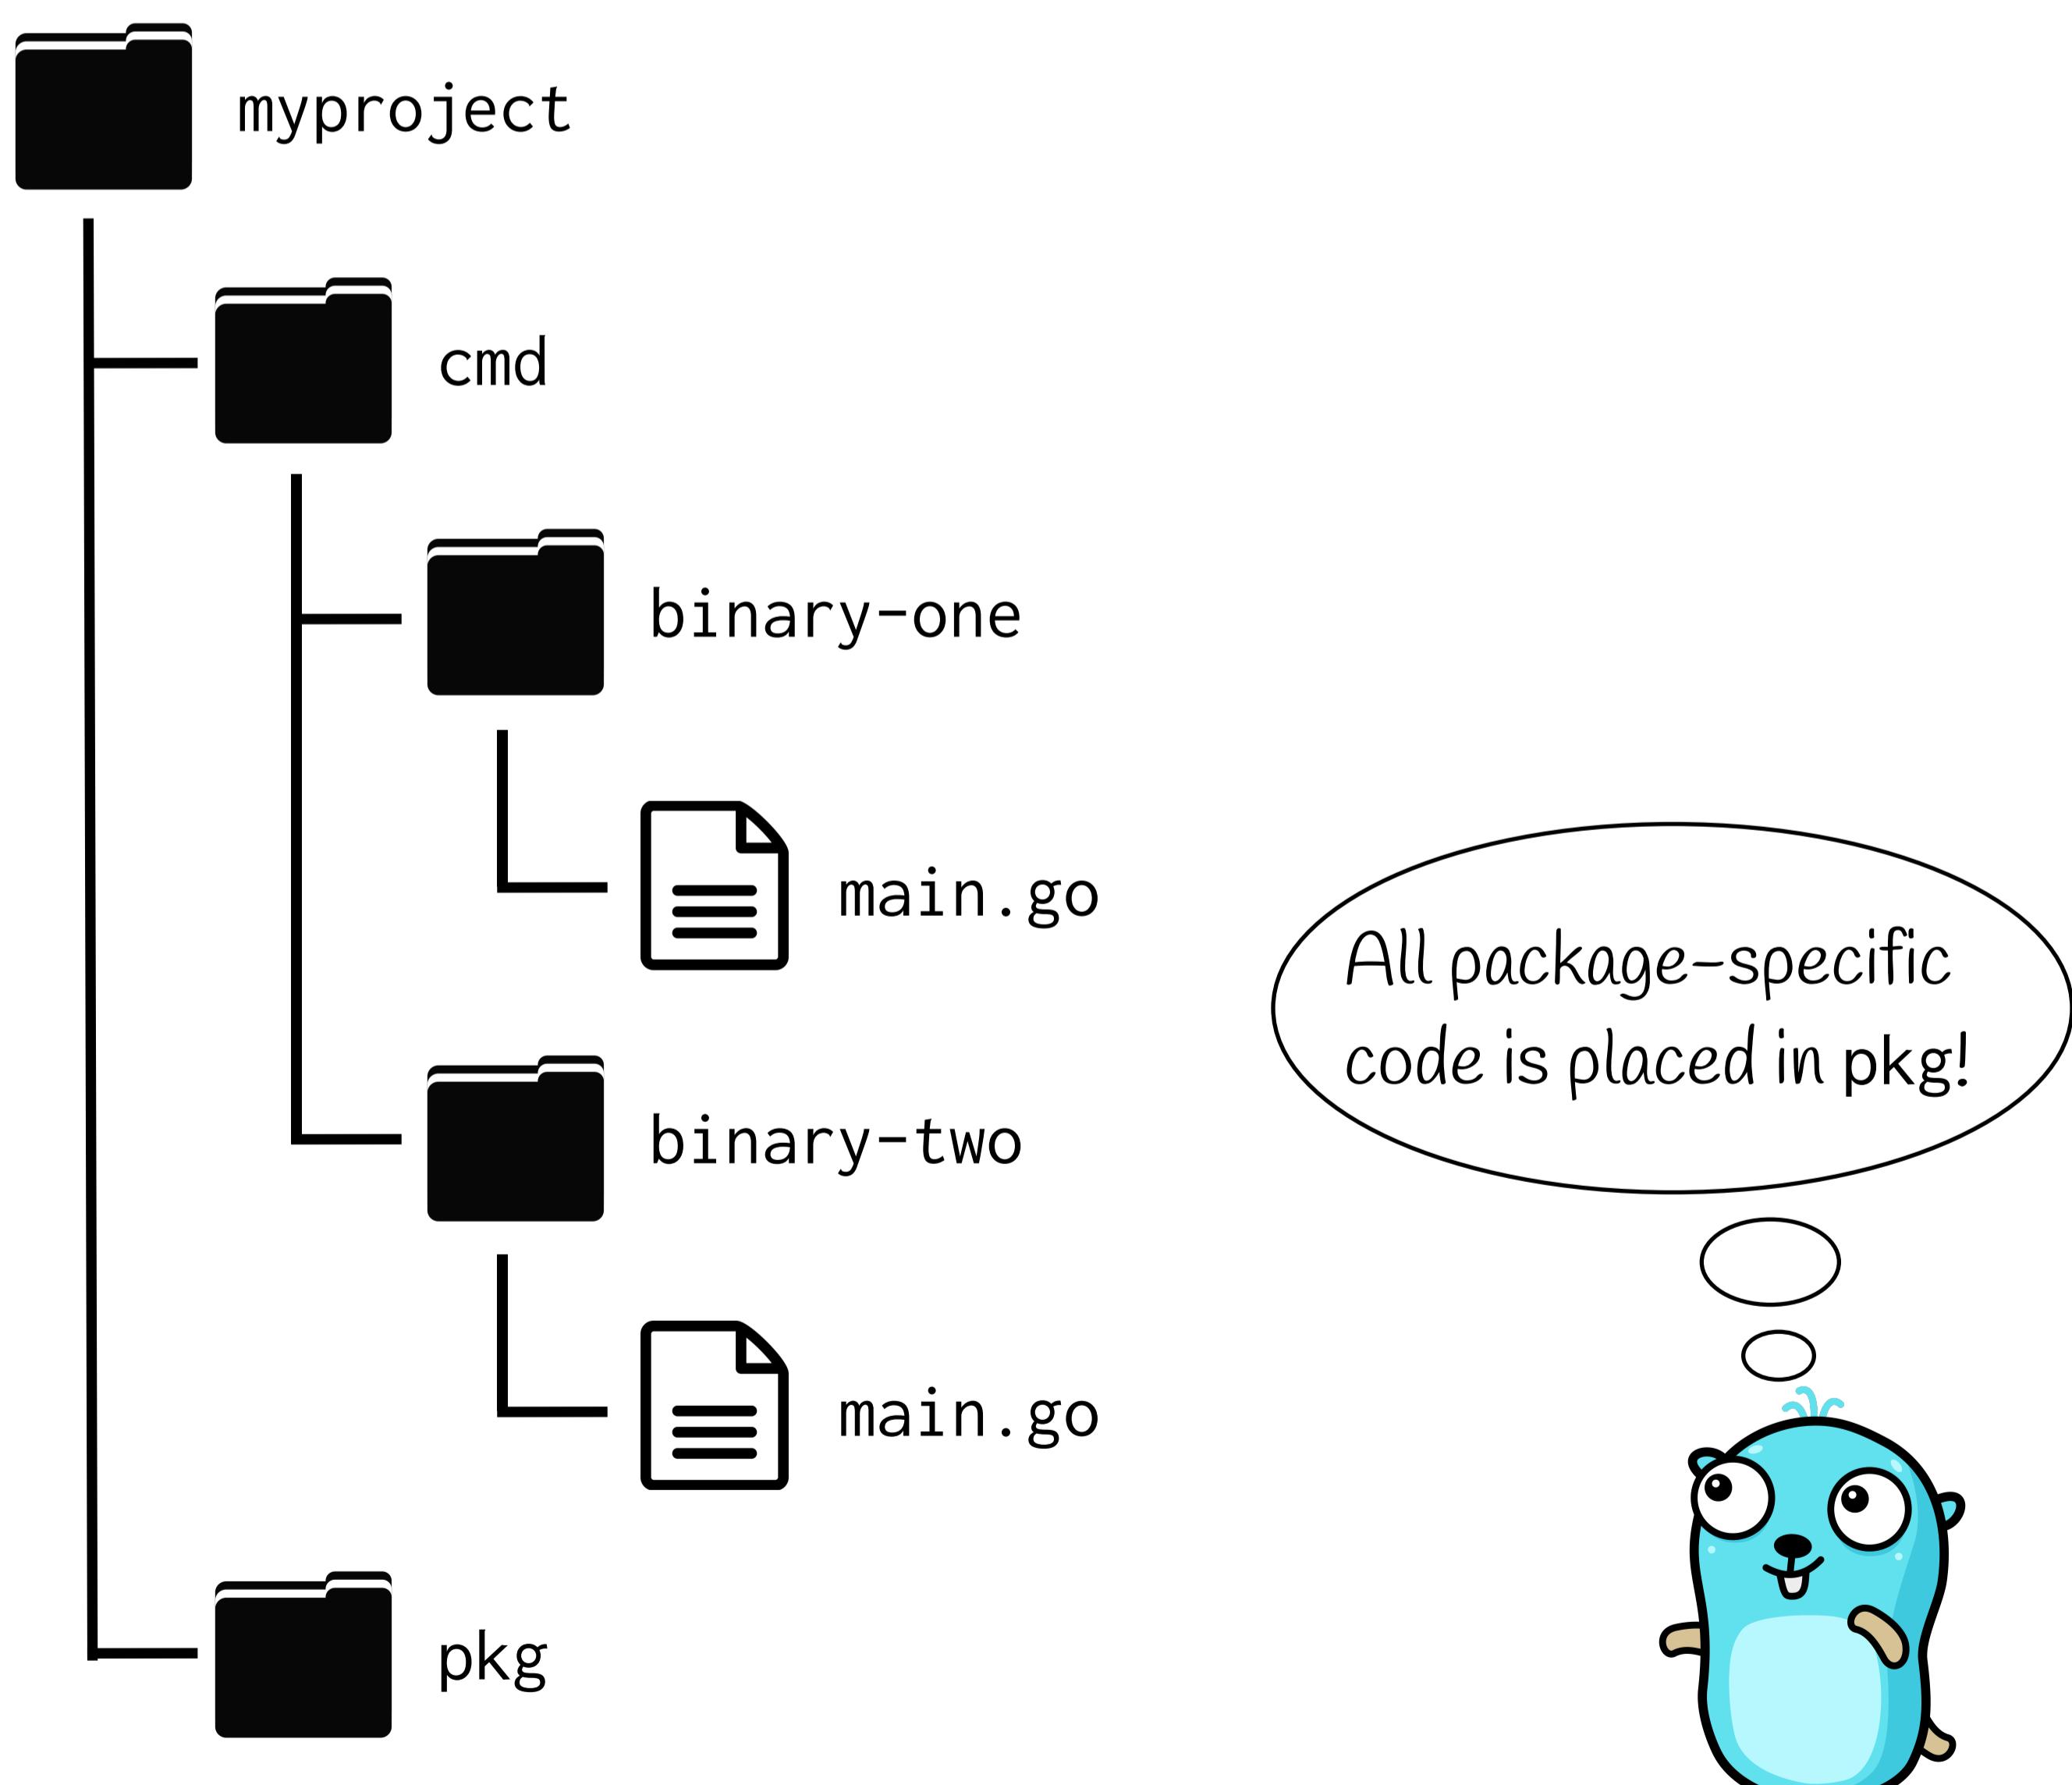

Step 1: In the root of your package, add a cmd directory.

Step 2: Add a new directory in the cmd directory, with the name of the binary. Add a main.go file inside.

Step 3: The package name of the main.go file must have the name of the binary.

Step 4: cd cmd/your-binary/ && go build. That's it!

This is the file structure we are looking for:
